

PRODUCT INFORMATION

ALTRAD Signat

Step forward – according to this slogan the ALTRAD plettac assco team has developed an innovative solution.

Developed for the unique identification of ALTRAD plettac assco scaffolding components. We are not just taking another important step towards digitalization, but also adapting once again to the requirements of our customers.

The scaffolding parts will be personalized with an identification code using the specially programmed and integrated SIGNAT NFC-Tag. Identification / scanning can be done by using your smartphone. The installed SIGNAT NFC-Tag in each scaffold component will provide important and assignable parameters, such as the customer name, item and invoice number and a unique identification number. The protection against manipulation of the NFC-Tag makes digital administration and inventory, live and real.

So far, scaffolding components have been marked with colour markings and embossing to verify / identify / proof ownership of the component. In particular, through the sale or transfer of components, the proof of ownership could not be provided in a legally secure manner. ALTRAD SIGNAT provides new tech based possibilities – by recording the transfer or sale of components in a specially for this purpose operated database. The components can be tracked in a legally secure manner.

Currently available for Vertical Frames SL. Additional products are currently prepared and tested.
