

PRODUCT INFORMATION

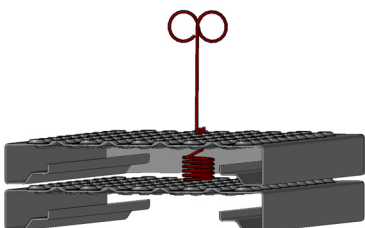

Deck retainer for perforated steeldecks

The security clip for steel decks allows a fast and flexible fixing against moving and lifting-up. For a quick assembly and disassembly a simple but effective tool is used. The open sculpt perforations of the steeldecks are used for assembly. Depending on the application/use two or three securing clips are needed.

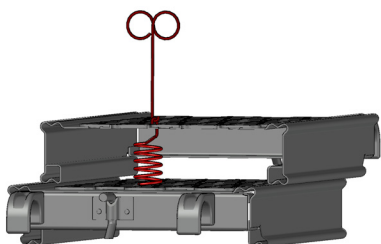

Code	Articel	Weight
5FDIV02200	Securing clip for steel decks	0.03 kg
5FDIV02201	Assembly tool for securing clips	0.02 kg

Fixing of system-free steel decks on system steel decks. Independent of hole pattern of steel decks.

Fixing of system-free steel decks on system-free steel decks.

System steel deck on system steel deck.

Installation:

The springs are fixed by tight turning in the perforation at the lower deck, then pulling through the open sculpt holes of the upper deck by using the tool; finally followed by fixing over the edge of the bulge.

Errors and technical changes reserved. Patent pending.
